Assignment 1 - Git & GitHub Fundamentals
Report Template

- **Full Name:** Aymen NHAILA
- **Student ID:** 159632
- **Course Code & Section:** CSC 3324 01
- **GitHub Username:** @lurantys

1. Repository Setup

I initialized `git-session1-lurantys` with `git init`. `.gitignore` excludes `local.env` and regular logs; an exception keeps `important.log` trackable.

2. README & Commit History

My README includes my name, username, project description, technologies, a code example, a link, and the supplied image. I made meaningful commits for setup, project changes, the About branch and merge, and remote updates.

Commit history

```
## main...origin/main
aymennhaila@Aymens-MacBook-Pro git-session1-lurantys % git log --oneline --graph --decorate --all -12

* 6912750 (HEAD -> main, origin/main, origin/HEAD) Add completed assignment report PDF
* 6d78821 Label the assignment project overview
* 1d72622 Keep important log eligible for tracking
* f92af39 Add About link to README
*   56b395d Merge about page feature
|\
| * 7efa315 (origin/feature/about-page, feature/about-page) Add an about page for the project
|/
* 82bbd81 Update page status and record Git workflow notes
* 02fd3ab Clarify the page title and introduction
* ab321bb Document project and technologies in README
* 8f3c0e3 Ignore local environment and regular logs
* 52087b9 Add starter project files
aymennhaila@Aymens-MacBook-Pro git-session1-lurantys %
```

3. Selective Staging

I changed `index.html` and `app.js` together, committed only `index.html`, and left `app.js` modified. I committed `app.js` later.

Both files modified; the changes are unstaged.

```
aymennhaila@Aymens-MacBook-Pro git-session1-lurantys % git status --short
git diff -- index.html app.js

 M app.js
 M index.html
diff --git a/app.js b/app.js

4. Branch & Merge

I added `ABOUT.md` on `feature/about-page`, committed it, switched to `main`, and merged the branch.

5. Remote Changes

A commit saves staged changes locally; a push sends them to GitHub. Fetch checks for remote changes without changing files; pull integrates them. I fetched my GitHub README edit, confirmed local `main` was one commit behind with no file changes, then pulled it.

6. Fair Use of AI

I used AI to help draft this report PDF and explain the difficult parts of merging branches and resolving conflicts. I asked about ignore rules, selective staging, branch merges, and fetch versus pull. I revised the wording and checked Git behavior with `git status`, `git diff`, `git log`, and `git check-ignore`.

7. Sources & Reflection

Sources: git commit, git push, git fetch, git pull, GitHub: ignoring files.
The hardest concept was merging branches and understanding conflict resolution; when I was unsure, I asked AI to explain conflict markers. My About branch merged without conflicts, and if one arose I would compare both versions before deciding what to keep. If Git behaved unexpectedly, I would first check the current branch and working tree with `git status -sb`, then inspect the diff.
